

Pole Rack

AE800

It consists of a metal structure with supports positioned at two different heights, made from square steel profiles, and equipped with four wheels allowing mobility.

All tube ends are sealed with plastic pressure caps.

All metal parts such as bolts, axes of rotation, etc. are zinc coated.

After a degreasing treatment, consisting of a pressured phosphate bath, the structure is painted with polyester powder paint and polymerized at 200° C in an oven.

Note: It is delivered disassembled.
