

## Set of nets + curtains for handball goals

PB210-0257

Set of two handball goal nets including the curtains to absorb the ball rebound, both in white colour.

Each net is constructed of high tenacity polypropylene knotless netting (Raschel system). The net thread thickness is 3 mm with a width of 100 mm in square configuration.

The total net dimension is 2.000 mm x 3.000 mm x 1.000 mm (both bottom and upper angle).

The curtains must be installed hung inside the handball goal. Its function is to absorb the ball rebound in high competition, in order to avoid the ball to come out again after the goal is scored.

The curtain is constructed of high tenacity knotless netting (Raschel system). The net thread thickness is 3 mm with a width of 100 mm in square configuration. In the upper part of the curtain there is a tension 6 mm string made of high tenacity polyamide.

The total curtain dimension is 2.000 mm x 3.000 mm

Both the net and the curtain perimeters are made also of high tenacity polypropylene string of 4 mm with Overlock sewing.
