

Set of handball goal attachment flanges for goal reference PB045

PB125

A set that consists of 4 flanges made of folded steel plates (two for each goal) to be placed on both sides of the goal. Its valid for model reference PB045.

They are used to anchor the goal's backstay to the floor. The flange design is adapted to the backstay rectangular shape to allow perfect fastening.

The flange also has a slotted hole to anchor the backstays to the ground.

Anchors are placed into a floor plate already in the floor. This way, when the screw is removed and the flanges stop holding the backstay, it is possible to move the goal leaving the plate flush with the floor, making the surface safe for the players.

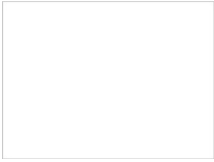

The expansion anchor (plug) and washer are included.

Standard colour: white.
