

Foam padding for one basketball board

PK960 - PK961 - PK962

Unit of foam padding for one basketball board . Its is composed of 4 pieces. Its design allows it to be also adapted to the minibasketball board dimensions.

It has been designed and manufactured in accordance with the European Standard EN-1270. Its main objective is to protect the players from possible impacts against the bottom part of the backboard.

The protector is made of reticulated polyethylene foam with a density of 33 Kg/m². It has four pieces, two side parts and two bottom parts to be fixed to the backboard.

The protector is fixed to the metallic frame with contact glue that is put on the protector.

The protector covers the backboard sides up to 390 mm high and all the bottom part. This ensures that not even one edge stays uncovered to avoid player injury.

Standard colour: blue.
