Basketball backboard consisting of a methacrylate backboard and metal frame. It's designed and manufactured to comply with the European Norm EN-1270.

The backboard is available in two dimensions:

- Basketball: 1800 x 1050 mm
- Mini basketball: 1200 x 900 mm

It is made of bonded methacrylate (density 1.19 Kg/m³) with a high impact resistance >10 Kg/cm² on the Charpy pendulum. It provides a high degree of light transmission, according to UNE 53340, as well as good transparency.

It can be manufactured in different thicknesses depending on the customer (10 mm, 15 mm, 20 mm, 30 mm).

The frame of the backboard is made of a rectangular steel section measuring 50x30 mm., placed on the front part of the acrylic which allows any type of MONDO basketball unit to be easily attached. This also facilitates the attachment of the rim.

The methacrylate backboard is joined to the metallic frame by screws that are incorporated in the acrylic itself, and, as a result, are not visible from the front side.

The steel screws have been subjected to a zinc treatment.

The white lines on the backboard established by the regulation are marked with vinyl.

The product is painted with polyester powder paint, which is applied after a degreasing treatment using a pressurised phosphate bath and cured in an oven at 200°C.

Standard frame colour: white.
