

Set of one side shotclock scoreboard with time + game time

MMFTIR - MMFTIC

Set of two shotclock scoreboards with game time FIBA approved, and designed to be placed over the basketball units. Each of them is connected to the control panel by radiofrequency or cable. The main scoreboard must be a MONDO to be synchronized with the main scoreboard game time.

Manufactured in a black embossing aluminum frame, each one has a total weight of approximately 15 kilos.

Its dimensions (including the luminous indicator) are 540 x 816 x 145 mm (each).

All the digits are made of high luminosity LEDs placed behind methacrylate sheets to be easily seen.

Digits indicating the possession time are red-colored and 30 cm high.

Digits indicating game time are green-colored and 15 cm high.

The upper warning indicator lights on automatically when the ball possession ends. It also contains a horn that goes on at the same time.

The scoreboard comes with a MONDO control panel from which this scoreboard can be easily operated.

Communication between the control panel and the scoreboard can be done by cable (MMFTIC) or radiofrequency (MMFTIR), depending on the customer's choice. MONDO strongly recommends cable communication for big indoor halls and basketball competitions due to the expected use of other external wireless devices at the same time.
