

Starting Block Cart WS

AC018

The frame of the cart is made from 30 mm diameter cold rolled steel tubes.

It is equipped with two 150 mm swivelling rear wheels and with two 200 mm fixed front wheels, with smooth colored rubber tread, allowing the movement of the cart in all directions. A handle is provided for easy transport.

Starting blocks are placed on a series of lateral supports. Between the lower and upper supports a slight slope is created, opposite to the direction of the cart handle, to prevent the starting blocks from tipping over. It can hold up to 8 pieces.

All tube ends are sealed with plastic pressure caps.

After a degreasing treatment, consisting of a pressured phosphate bath, the structure is painted with polyester powder paint and polymerized at 200° C in an oven.
