

Javelin Cart WS

AL215

The frame of the cart is made from 30 mm diameter cold rolled steel tubes.

It is equipped with two 150 mm swivelling rear wheels and with two 200 mm fixed front wheels, with smooth colored rubber tread, allowing the movement of the cart in all directions. A handle is provided for easy transport.

Javelins are placed into a structure consisting of two perforated plates overlapped at two different heights. It can hold up to 16 pieces.

All tube ends are sealed with plastic pressure caps.

After a degreasing treatment, consisting of a pressured phosphate bath, the structure is painted with polyester powder paint and polymerized at 200° C in an oven.
