

Aluminium Bench

PS021

The bench, made of extruded aluminium profiles, Mondo's own design, free of sharp edges, is 2.5 m long and is supported by two supports at each end and one at the center.

The supports are made of 40 mm aluminium profiles of circular cross section. All components are jointed using aluminium rivets.

After a degreasing treatment, consisting of a pressured phosphate bath, the structure is painted with polyester powder paint and polymerized at 200° C in an oven.
