

Tape Winder WS

AL155

The tape winder consists of a supporting structure and a winder drum, both made of steel.

The supporting structure consists of a tubular frame and a curved metal sheet which prevents the tape from escaping out of the drum. Two rear wheels with plastic core and colourful rubber tread facilitate the movement during tape winding and unwinding operations.

After a degreasing treatment, consisting of a pressured phosphate bath, the structure is painted with polyester powder paint and polymerized at 200° C in an oven.

The tape is not included.
